Polyester Technology

AQUAFIL LBT® + DFC® polyester plant completion

SRF (Thailand) and AQUAFIL Engineering GmbH (Germany) have completed and started a new polycondensation plant in Thailand. The common project team of both companies have done an excellent work over the past months under the conditions of Corona pandemic. The team solved a lot of Corona challenges in a great way (1 year of project had been completely in Corona times), which allowed SRF to start up the plant with AQUAFIL Remote Support after only 2 years after contract signature. The plant is using the unique and newest AQUAFIL PET film technology and reached excellent quality and nominal capacity after a few days. The plant has lowest building and erection costs due to AQUAFIL LBT® and the world “fastest” technology for film line speed due to AQUAFIL DFC®. Additionally it has the lowest environmental impact due to low utility consumption and the usage of a part of the AQUAFIL EverPET® recycling technology.

For more information regarding LBT® or DFC® or EverPET®, please contact us.
